Brief Introduction to R package gact

Palle Duun Rohde, Izel Fourie Sørensen, & Peter Sørensen

2022-10-29

Contents

The practical is based on the R package `gact` (Rohde et al.2022)). This package provides an infrastructure for working with large-scale genomic association data linked to different types of genomic features.

The most recent version of `gact` can be obtained from github:

```
library(devtools)
devtools::install_github("psoerensen/gact")
```

Load packages used

```
library(gact)
library(qgg)

library(org.Hs.eg.db)
library(reactome.db)

library(corrplot)
```

Download and install GDT database

The function `gact()` dowload and install the GDT database:

```
# Set working for database
setwd("C://Users//au223366//Dropbox//Projects//balder")

# Download data bases from repository
GACTdb <- gact(version = "t2dm-gact-0.0.1", task = "download")
```

Extract data from GDT database

The function `getStat()` extract data from the database:

```
# Extract data from T2D for genomic feature Genes
stat <- getStat(GACTdb = GACTdb, trait = "t2d", feature = "Genes")
head(stat)
```

```
##                 Ensembl Gene ID   Symbol   m     stat      p

##   .. ..$ : chr [1:5] "p=1e.04" "p=0.001" "p=0.05" "p=0.1" ...
```

```
# Plot results for genomic feature Gene Ontology (GO)
colbar <- colorRampPalette(c("#FFFFFF", "#D1E5F0", "#92C5DE", "#4393C3",
    "#2166AC", "#053061"))
corrplot(-log10(stat$p[1:10, ]), is.corr = FALSE, tl.cex = 0.7, tl.srt = 45,
    col = colbar(6), cl.pos = "n", mar = c(1, 1, 1, 1))
```
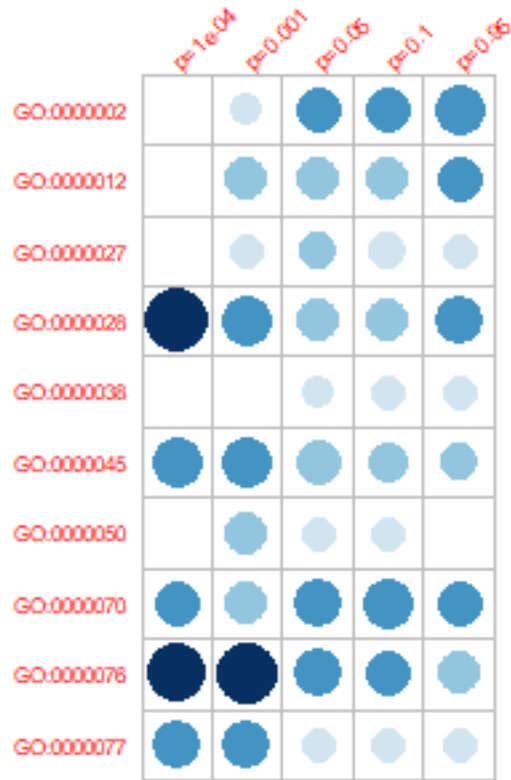

Extract and write data from GDT database

The function `writeStat()` extract and write data from the database:

```
writeStat(GACTdb = GACTdb, feature = "GO", trait = "t2d", file.csv = "go_t2dm_gcta.csv")
writeStat(GACTdb = GACTdb, feature = "Pathways", trait = "t2d", file.csv = "pathways_t2dm_gcta.csv")
writeStat(GACTdb = GACTdb, feature = "ProteinComplexes", trait = "t2d",
    file.csv = "proteincomplexes_t2dm_gcta.csv")
writeStat(GACTdb = GACTdb, feature = "ChemicalComplexes", trait = "t2d",
    file.csv = "chemicalcomplexes_t2dm_gcta.csv")
writeStat(GACTdb = GACTdb, feature = "Genes", trait = "t2d", file.csv = "genes_t2dm_gcta.csv")
```
